

Senior Scientist - Viticulture and Oenology (Vacancy 1998)

This senior role in our wine grape team provides research leadership in the regulation and quantitative analysis of wine grape metabolite development, complementing current research on vine physiology, canopy management and environmental responses.

Working closely with the Team Leader, you will make an important contribution to the development and leadership of viticulture and oenology research at Plant & Food Research. This will require a proven ability to work with the wine grape industry to develop and secure support for research and development projects that advance the industry's targets and strategy.

A sound knowledge of the wine grape industry, with experience in viticulture and oenology together with strengths in leading and motivating people will be essential.
